

DO YOU KNOW?

VSHOOTER® MCP (Machine Condition Picture) - What is it?

A **MCP** is a new easy way to do Vibration Analysis for Predictive Maintenance program (PdM program). No need of special PC Software!

This new concept invented by **SYNERGYS TECHNOLOGIES** consists to automatically see the machine vibration condition in a one shoot photo.

What can you see on the **MCP**?

Machine photo with name & date

Measurement points locations with name (RV-RH-AX)

Measurement points condition status (color indications ●●●●●)

to view all data (OVERALL - FFT - TREND)

to view the detected machine defaults

This **MCP** is stored in the **VSHOOTER®** memory and can be downloaded to PC for reporting. This **MCP** can also be updated in time to create TRENDS.
