

DID YOU KNOW?

VSHOOTER® PC FILES TRANSFERT – How it works?

After connecting the VSHOOTER® to your PC via USB cable, you can see project files (.prj) and report files (.html) opened by WINDOWS.

Project files can be **downloaded** from VSHOOTER® to PC for data saving but also can be **uploaded** from PC to VSHOOTER® for data exchanging between different VSHOOTER® users.

For example, you can send your project file to anyone who has a VSHOOTER® by email, he will be able to open and analyze it.

This advantage can be useful for a data exchange between End user customer and Expert service provider or for another need.

Report files can be downloaded from VSHOOTER® to PC to be saved or printed or modified or sent by email to anyone.

HTML report can be opened with WORD to be edited and customized.
